

Support & Clean Renewable Energy Today

Here are the sources of our Clean Renewable Offering:

33% New Wind Clean • Fresh • Endless

Wind Energy is helping to meet America's growing need for clean energy.

Wind is pollution-free. It helps to strengthen our nations energy independence, assists rural communities, and in the long run lowers everyone's

energy cost with a foreign oil free energy source that won't run out.

34% Landfill Gas Reduces Green House Gases

The EPA has found that reducing methane emissions from landfills is one of the best ways to reduce global warming. Methane is significantly more harmful to our atmosphere than carbon dioxide. Turning land fill gas into electricity helps reduce greenhouse gases and turn this environmental threat into a source of renewable energy.

33% Connecticut Small Hydro

Local • Dependable

Small hydro helped build America's industrial base. From grist mills to our early factories, water powered much of America through the 1800s and early 1900s. With today's technology, we can once again meet some of our energy needs with hydro and do so in an environmental friendly manner.

How It Works

When you sign up, you are supporting renewable energy generated from Wind, Landfill Gas and Small Hydro Sources. You will continue to power your house or business on the same reliable energy you have always received from Groton Utilities, while your purchase helps support generators that produce wind, landfill gas and small hydro power, helping put more renewable energy into the system.

All our purchases of renewable energy are verified by the State of Connecticut. Each month, an additional charge of 1.1¢ per kWh will be added to your electric bill. We are giving you several options, to make it as easy and affordable as possible to help support the environment and help make cleaner electricity for all of us.

Green Energy Options you can sign up for:

Example A	Example B
100 kWh per month block at \$1.11/month additional	500 kWh per month block at \$5.55/month additional
Up to your monthly average kWh usage	
100% Green option - additional cost is based on monthly consumption at 1.1¢ per kWh	
Average State of Connecticut residential kWh consumption is 700 kWh/ month

Conservation is the Key

Energy costs are high and going higher at least for the near future. Since the least expensive kilowatt hour is the one that you never use; conservation is the best response to the current situation. Groton Utilities has implemented several programs to help our customers reduce consumption and consequently lower their bills.

Customer Commitment

We, at Groton Utilities are constantly searching for ways to keep our rates as low as possible and believe there will be more opportunities in the future. As equipment and technology improve, it will become possible to measure electrical usage in "real time" and give customers more options to decide how and when to use electricity. Green Energy options are steps in this process, but you can be sure that we will avail ourselves of every opportunity to keep our reliability as high as possible and our rates as low as possible. That's our mission for our customers.
