## Change a light, change the world

# Save with Energy Star

Buying products with an Energy Star label is a smart use of your energy. Whether you're in the market for lighting, appliances or even a new home, that little symbol means you're getting the best energy efficiency. So you'll not only be saving money, you'll be helping to save the environment, too.

If every American were to replace five bulbs in their home with energy-efficient bulbs, together we would keep more than one trillion pounds of greenhouse gases out of our air. (See more Energy Star lighting facts on page 2.)

As your local municipal utility, Groton Utilities wants to help you use energy wisely, which saves money, preserves natural resources and helps improve the environment. Please call us for more information about saving energy and money with very little sacrifice.

Also, check your bill inserts and newsletters for upcoming information on additional electric conservation programs offered by Groton Utilities. We're now developing more innovative ways for consumers and businesses to save energy and money. As these new programs become available, we will let you know through our quarterly *Connections* newsletter enclosed with your bill, or in a special edition of *Connections* mailed to your home.

You can find a complete selection of efficient lighting in the Energy Star Lights catalog sent to all our customers during October. If you need a copy, a limited supply is available. Call our Customer Care Center at 446-4000 or visit the Center during business hours. You can also find out more about the Energy Star program at [www.energystar.gov](http://www.energystar.gov).
